

Satellite radio is an innovation unsurpassed by public radio at this point in time. Not only do I enjoy the commercial free music from all era's, but the master design of the system is boundless. Please protect satellite radio and allow them to provide public service as well with instant traffic and weather for major metropolitan areas. Many times when you are in one of these areas, it is difficult to find a local station with up to the minute traffic and weather updates, especially if you are not from the area. XM Radio is safer to have because as a subscriber, I know where to tune immediately for this service and it is a useful service I would like to have in my paid subscription.
